Subject: Environmental Policy towards suppliers

Dear Supplier,

we want to draw your attention to topics that GUARNIMED believes to be of common interest, such as the environmental aspects and the sustainable development, in order to strengthen our cooperation in terms of containment of impacts and circular economy.

Innovation and product performance are developed by GUARNIMED through new production methods and they tend to save resources, to optimize space and to production efficiency. The "modus operandi" is constantly under discussion to optimize processes and not to waste anything.

For this reason, our initiatives aim to increase awareness and skills of our staff on the opportunities for a sustainable management of our market supply chain and the relative life cycle.

We are convinced that one of the fundamental environmental aspects in a company is being aware that compliance with defined rules leads to respect for ourselves, as citizens of the world, and therefore primarily responsible for protecting our health and our welfare.

We therefore want to involve and influence you to develop an environmental policy that will be a positive point of judgment of our internal supplier qualification by monitoring your performance, reviewed every six months with appropriate KPIs.

We therefore invite you to inform us about the environmental policies that you are implementing in your company.

In case you are already ISO14001 certified, we kindly ask you to send us a copy of the certificate.

We thank you for your cooperation.

GUARNIMED SRL
